Cover letter

Dear Sir or Madam,

I am writing to apply for the Business Analyst position.

I am a recent graduate of Stockton University from which I graduated with a BS in Mathematics holding a 4.0 average. I tried teaching, but the lack of content given by the state standards has helped me realize my need to apply myself fully at a job. Considering I enjoyed my programming courses and solving problems, I decided to pursue a Master's program Data Science and Strategic Analytics at Stockton University.

Theoretical knowledge is great, but at the end of the day, practical application of that knowledge is what matters the most. Stockton University realizes this and has set up the Master's program in a way that a full-time working professional can attend. In fact, the experience of working full-time with data as I continue my studies is what will give me the opportunity to be fully immersed in the content I am learning. One of the lessons I still hold on to from my time as an exchange student is that in order for a person to be successful in today's world, one needs to be a lifelong learner and thankfully, the path I chose allows me to do just so.

Throughout my schooling, position as a teacher in New Jersey public high school, and as a financial representative of a non-profit organization in Serbia I have used MS Excel for over eight years. In addition, I have some experience in MS Access as I created and managed a member and project database for the same non-profit organization in Serbia. Moreover, I have solid programming knowledge from courses such as C# and Theory of Computation and I am excited to learn more technical skills relevant to my field such as SQL, Python, R, and so on.

I enjoy having everything in perfect order so I can assure you that whatever the task, I will either complete it considering every little detail, or I will ask appropriate people for help or guidance.
